

# Memorandum

---

**To:** Board of Managers  
Buffalo-Red River Watershed District

**From:** Bennett Uhler, PE  
Houston Engineering, Inc.

**Subject:** Whiskey Creek Enhancement Project  
Water Management District  
Charge Determination

**Date:** June 28, 2021

**Project:** 1915-0247

## INTRODUCTION

The provisions for the collection of charges under MS 103D.729 gives a Watershed District, through the amendment of its plan or during an update to the Comprehensive Watershed Management Plan (CWMP), the authority to establish one or more Water Management Districts (WMD) for the purpose of collecting revenues and paying the costs of projects initiated under sections 103B.231, 103D.601, 103D.605, 103D.611, or 103D.730. The establishment of a WMD requires the description of the methods used to determine the charges. These methods were generally described within the Buffalo-Red River Watershed Comprehensive Watershed Management Plan (BRRW CWMP, finalized on October 28, 2020). The methods for the proposed Whiskey Creek Water Management District (Whiskey Creek) are further described and the charges determined using these methods by this Memorandum. A general philosophy for funding project discussion believed to be consistent with the policies established within the BRRW CWMP is also presented.

## THE PROJECT

The current project for which a WMD is being considered is the Whiskey Creek Enhancement Project. The project involves several miles of Whiskey Creek channel restoration and streambank stabilization, which would result in the construction of a two-stage channel with expanded vegetative buffers, side water inlets, and other sediment control BMPs along the length of the stream. The BRRWD has applied for and received permits from the Minnesota Department of Natural Resources (DNR) [Phase 1 only] and the US Army Corps of Engineers (USACE) for this work. The project also includes the promotion and implementation of upland conservation practices within the Whiskey Creek watershed. The BRRWD has also completed the Environmental Assessment Worksheet (EAW) process with a Record of Decision, dated July 13, 2020, that an Environmental Impact Statement (EIS) is not needed for the project.

## OPINION OF PROBABLE CONSTRUCTION COST

The Opinion of Probable Cost for the project (referred to as the “project estimated cost”) is \$9.9 Million. The Opinion of Probable Cost associated with work along the channel restoration corridor, estimated by the District Engineer, is \$7 million. Other project costs are associated with conservation practices installed in the Whiskey Creek Watershed, away from Whiskey Creek or its public water tributaries. It is anticipated that more than 50 percent of the overall project costs will come from federal, state, and other outside funding sources. Local funding is anticipated to come in part from a Water Management District.

## WMD BACKGROUND

The BRRWD, through their CWMP, has the authority to establish one or more Water Management Districts for the purpose of collecting revenues and paying the costs of projects initiated under sections 103D.601, 103D.605, 103D.611, or 103D.730. To use this funding method, Minnesota law (MS 103D.729) requires that the area to be included in the WMD be described, the amount to be charged identified, the methods used to determine the charges described, and the length of time the WMD is expected to remain in force specified. Whiskey Creek is within the Upper Red planning region, as described in the BRRW CWMP. The WMD may be dissolved by the procedures prescribed for the establishment of the Water Management District. Based on the BRRW CWMP, the maximum WMD revenue limit within each WMD is based on 0.10% of the taxable market value within each planning region. For the Upper Red planning region this equates to a value of approximately \$310,000. To help keep the local cost down on a year-by-year basis, an assessment value of \$150,000 per year has been chosen. **Figure 7** shows a breakdown of the proposed annual charge per acre within the Whiskey Creek watershed of the Upper Red planning region. Based on the proposed per acre charge, and due to mathematical rounding described later in this memo, \$149,916.38 could be raised annually from Whiskey Creek portion of the Upper Red planning region. This value of \$149,916.38 has been used for the purposes of computing the estimated WMD charges.

## PROJECT FUNDING APPROACH

At this point, it is anticipated that the BRRWD will look for a package of funding to pay for the Whiskey Creek Enhancement Project. The BRRWD has applied for various grant funds to defray the local cost of this project and will continue to look at ways to bring funds into the project from non-local sources. In that regard, the BRRWD and its Wilkin SWCD partner have been successful in being awarded various grants. The Wilkin Soil and Water Conservation District has approximately \$640,000 in a Clean Water Fund Grant from the MN Board of Water and Soil Resources (BWSR) to be used for the Whiskey Creek project. This grant must be matched with 25% non-state funds. In addition, the BRRWD was the recipient of a \$2.9 million National Water Quality Initiative grant through the Natural Resources Conservation Service, which typically pays for only a portion of the overall project cost and must be matched with non-federal funds. The BRRWD has also been recommended for funding by the Minnesota Pollution Control Agency through their Section 319 grant program. It is expected that approximately \$280,000 will be available for 4 cycles, each 4 years in length, for a total value of approximately \$1 million. The Section 319 grant program requires a 40% non-federal share. Finally, the BRRWD is requesting \$2 million from the Outdoor Heritage Fund (OHF) grant program through the MN Department of Natural Resources. The first installment of the OHF money (\$520,000) is expected to become available after July 1, 2021. The BRRWD and the Wilkin SWCD continue to pursue additional outside funding to defray the local project implementation costs. These include programs through the State of Minnesota, the

Natural Resources Conservation Service (NRCS) and the Conservation Reserve Enhancement Program (CREP). The WMD envisioned for this project is looked at as a supplemental stream of funding to match outside funding brought in through grant funds and other programs (such as EQIP, CREP, RIM, WRE, etc.) The exact funding package is not fully known at this time. It is also anticipated that the BRRWD will provide funding through funds raised District-wide through a MN Statutes 103D.905 Subd. 3 levy. **Table 1 and Table 2**, shown below, summarize project costs and the current potential funding assumptions.

**Table 1:** Whiskey Creek Enhancement Project – Opinion of Probable Cost

Portion of Work	Estimated Cost	Comments
Corridor restoration of Whiskey Creek and its public water tributaries	\$7,000,000	Based on Engineers Report from the AIG study
Additional upland agricultural treatments and conservation practices	\$2,900,000	Based on upland work proposed in the NWQI Application
<b>Total Estimated Cost</b>	<b>\$9,900,000</b>	

**Table 2:** Whiskey Creek Enhancement Project – Potential Funding Options

Funding Source	Estimated Amount	Comments
Section 319	\$1,000,000	\$284,275 awarded for 1 <sup>st</sup> round (per MPCA). Eligible for 4 cycles, each 4 years per cycle.
BWSR Clean Water Fund	\$640,000	Currently the Wilkin SWCD has \$640,000 which can be used to match for Federal funds (NWQI and Section 319)
National Water Quality Initiative (NWQI)	\$2,900,000	Funding approved, but subject to landowner eligibility and participation
Conservation Reserve Enhancement Program (CREP)	\$1,160,000	Easements
	\$100,000	Seeding/vegetation establishment
DNR Stream Habitat Program (LSOHC-OHF)	\$2,000,000	An estimated \$520,000 available after 7/1/2021
Water Management District	\$700,000	Estimated at 10% of the stream corridor work
BRRWD 103D.905 Subd. 3	\$1,400,000	Estimated at 20% of the stream corridor work
<b>Total Estimated Funding</b>	<b>\$9,900,000</b>	

## DETERMINING THE WMD BOUNDARY

The drainage area of the project is located within the Upper Red planning region of the BRRWD. The total calculated area within the project boundary is approximately 103,375 acres. Only the portion of the Upper Red planning region that drains to Whiskey Creek has been included in the proposed WMD. When the planning region hydrologic boundary crossed a parcel, that portion of the parcel within the hydrologic boundary was included in the WMD. Through discussions with BWSR, the BRRWD will limit the WMD to the portion of the Upper Red planning region that contributes runoff to Whiskey Creek. In total, this includes about 97,202 acres. Portions of the Upper Red planning region that do not contribute runoff to Whiskey Creek will not be assessed

charges, and in turn will not be allowed to apply for project funds through the WMD. The lands shown in **Figure 1** are those within the Upper Red planning region and the proposed Whiskey Creek WMD, except for areas that may be removed for non-contributing reasons.

## SUMMARY OF CHARGE DETERMINATION

The BRRW CWMP laid out four general methods to determine charges for the Water Management District. The methods proposed to establish the charges will be based upon the proportion of the runoff volume and/or sediment load contributed by a parcel or may be based on the drainage area of the parcel, within the Water Management District. What is described below is a refinement to the methodology listed in the BRRW CWMP due to limitations of the available geospatial data.

### *MODIFIED COMBINED RUNOFF AND EROSION METHOD*

This method establishes rates based equally on a runoff method and a sediment loading method. The runoff method uses SSURGO Soils and Land use data (2019 National Agricultural Statistics and Service) to calculate a curve number related to the percentage of runoff estimated from a rainfall event (10-year, 24-hour). Preliminary review of the 2019 National Agricultural Statistics and Service (NASS) showed several discrepancies with actual landuse data, based on more recent aerial photography and the use of other available tools. Existing riparian corridors were identified and replaced within the NASS data. Lands enrolled in conservation related programs were identified and assigned the landuse of grassland. The National Wetland Inventory (NWI) and the National Hydrography Dataset (NHD) also proved to be more accurate than the NASS data, so this information was used to determine wetlands and waters within the project boundary. Parcels that are inside of corporate limits were considered city lots and assigned the landuse of medium density development. Farmstead parcels that were not already split into separate areas were adjusted from agricultural landuse to low density development. Existing road right-of-way data for Wilkin County was used, along with a small portion of Otter Tail County. Most of the existing right-of-way was present within the parcels; however, parcels that did not include road right-of-way were assumed to be 33 feet on either side of the road centerline. Road right-of-way areas are exempt from this analysis. The existing landuse was identified as nine categories: 1. Open Water, 2. Developed, Open Space, 3. Developed, Low Density (Farmsteads), 4. Developed, Medium Density (City Lots), 5. Mixed Forest, 6. Grassland/Herbaceous, 7. Cultivated Crops, 8. Woody Wetlands, and 9. Emergent Herbaceous Wetlands. **Figure 1** shows the landuse types and areas identified within the project boundary, as described above. **Table 3** shows the curve number based on soil type and landuse. The SSURGO Hydrologic Soil Group data within the project area was used to determine the SCS Curve Number (CN) for runoff. For soils that had a dual classification rating (A/D, B/D, and C/D), a weighted average between the drained and undrained condition was used. Wetlands and waters were exempt from this average and the same value was used under all conditions. **Figure 2** summarizes the SSURGO soils map and **Figure 3** summarizes the CN values throughout the project area.

**Table 3:** Pervious CN by Hydrologic Soil Group

Land Cover Code	Pervious CN by Hydrologic Soil Group						
	A	B	C	D	A/D	B/D	C/D
Open Water	100	100	100	100	100	100	100
Developed, Open Space	45	65	76	82	63	73	79
Developed, Low Density (Farmsteads)	60	71	82	86	73	80	84
Developed, Medium Density (City Lots)	77	85	90	92	85	88	91
Mixed Forest	30	55	70	77	54	66	74
Grassland/Herbaceous	30	58	71	78	54	68	75
Cultivated Crops	61	71	78	81	71	76	80
Woody Wetlands	78	78	78	78	78	78	78
Emergent Herbaceous Wetland	85	85	85	85	85	85	85

### RUNOFF CHANGES

The runoff values for the project area were calibrated by comparing the runoff results from a 10-year, 24-hour rainfall event (3.70 inches) for pre-settlement and existing conditions. Pre-settlement conditions used a landuse of grassland/herbaceous across the entire area outside of existing wetlands and open water, while existing conditions used the landuse as exists today. The initial mapping showed minor changes in runoff based on soils and landuse, and the project area was split into two main spatial groups; 1. Areas of active agriculture (east and west) and 2. Areas of high wetlands and conservation lands (central). An average CN for each landuse was calculated in each area to normalize the data and reduce large fluctuations in assessment values between individual parcels within a given area. The difference in runoff values were summed and each parcel was assigned its relative percent of the total project area, by landuse. **Figure 4** shows the runoff difference, in inches, throughout the project area.

### SEDIMENT LOSS CHANGES

The RUSLE equation was used to determine the sediment loading values for pre-settlement and existing conditions. The RUSLE equation has only a few factors that can be changed, as most of the physical and climatic properties are fixed. The slope length can change if terracing was used to break the slope into smaller segments. There are no fields in the study that terracing would be effective, so this factor is also considered fixed. Only the cover and practice factor can change over time. The per unit cell sediment load was calculated on the pre-settlement landuse and the existing conditions landuse. The initial mapping showed minor changes in sediment loading based on topography and the project area was split into two main spatial groups, similar to the runoff analysis; 1. Areas of active agriculture (east and west) and 2. Areas of high wetlands and conservation lands (central). An average sediment load was calculated in each area to normalize the data and reduce large fluctuations in assessment values between individual parcels within a given area. The difference in sediment loads between pre-settlement and the existing conditions were summed and each parcel was

assigned its relative percent of the total project area by landuse. **Figure 5** shows the RUSLE sediment difference throughout the project area.

### CONTRIBUTION AREA

Not all the land within the project area contributes runoff and sediment during a 10-year, 24-hour rainfall event. In fact, there are some areas that do not contribute during a 100-year, 24-hour event. **Figure 6** summarizes the non-contributing areas within the project boundary, based on specific rainfall events. To account for areas with reduced contribution, or no contribution at all, a multiplier was used based on the event frequency. The total change in runoff and sediment load was adjusted based on this multiplier, as shown in **Table 4**.

Table 4: Runoff and Sediment Adjustment Multiplier

Rainfall Event (24 Hour Storm)	Multiplier	Area (Acres)
Less than 10 Year	1	95,536
10-25 Year	0.4	478
25-50 Year	0.2	627
50-100 Year	0.1	561
100 Year or Greater	0	6,173
<b>Total Area – Contributing (Less than 100-year, 24-hour event)</b>		<b>97,202</b>
<b>Total Area – Non-Contributing (Greater than 100-year, 24-hour event)</b>		<b>6,173</b>
<b>Total Area (Combined)</b>		<b>103,375</b>

### WMD ANNUAL CHARGE PER ACRE

To calculate the annual charge per acre, the annual project Water Management District charge estimate of \$150,000 was multiplied by the percent runoff change and total sediment change for each parcel, then adjusted to the frequency of the multiplier shown in **Table 4**. All agricultural land was assigned the same cost per acre assessment. Parcels located within City limits were charged a minimum of \$1 per year, and parcels with a charge of less than \$0.50 per year were rounded down to \$0. In addition, parcels with a charge between \$0.50 and \$1 per year were rounded up to \$1 per year, to simplify billing. All parcel charges above \$1 per year were assigned their calculated value. Following the methods previously described, the exact charge estimate, due to mathematical rounding, equals \$149,916.38. **Figure 7** summarizes the charges per acre/per year on a parcel basis based on the annual WMD charge estimate of \$149,916.38. The total annual charges per parcel are summarized as found in the tables in **Exhibit A**.

### THE WATER MANAGEMENT DISTRICT DURATION

The BRRWD anticipates the Water Management District will provide funding to assist with the implementation of the Whiskey Creek Enhancement Project. The Water Management District will remain in existence in perpetuity (or a shorter duration, should the Board decide to limit the duration). Annual assessment of charges could vary from no charges up to the maximum WMD revenue limit of the planning region.

The primary use of the funds collected from charges within the Water Management District will support stormwater runoff and water quality projects that help achieve the goals of the planning regions which benefit residents within the Upper Red planning region Water Management District. This Water Management District will be specific to the establishment and maintenance of the Whiskey Creek Enhancement Project.

## THE WATER MANAGEMENT DISTRICT PROCESS

Draft guidance as to the process of creating a WMD has been provided by BWSR. The process involves eight steps. The first two steps are addressed through the revision of the Watershed Management Plan. The remaining steps 3 through 8 must be completed prior to any collection of charges in any WMD. This memo provides the guidance for Steps 3 and 4. The remaining steps 5 through 8 still need to be completed.

**Step 1.** Amend Watershed District Plan to create a water management district.

Amendment must include:

- Description of area to be in the water management district
- The amount to be raised by charges (total amount is necessary if fixed time for water management district to be in force, otherwise annual maximum (cap) amount)
- The method that will be used to determine the charges
- The length of time the water management district will be in force (perpetuity is acceptable)

**Step 2.** Approval of Plan amendment under M.S. § 103D.411 or as part of a revised Plan under M.S. § 103D.405.

- Revised Plan, or petition and amendment, sent to BWSR
- BWSR gives legal notice, and holds hearing if requested
- BWSR orders approval or prescribes plan or amendment
- BWSR notifies WD managers, counties, cities, SWCDs

**Step 3.** Watershed District refines methodology for computing charges.

**Step 4.** Watershed District determines and sets charges for all properties within the water management district after identifying scope of project and deciding method(s) of funding project.

**Step 5.** Watershed District develops collection mechanism.

- Request County or Counties to collect, or Billing and collection by Watershed District

**Step 6.** Watershed District holds hearing, orders the establishment (implementation) of a project in the water management district, and initiates stormwater utility charges.

- Projects implemented must be ordered by the managers
- Order for project must specify funding method(s)
- Watershed District must notify counties, cities, and towns within the affected area at least 10 days prior to a hearing or decision on projects implemented under this section of statute

**Step 7.** Watershed District establishes a separate fund for proceeds collected from the stormwater utility charges.

**Step 8.** Resolution of Disputes. Local governments may request BWSR to resolve disputes pursuant to M.S. § 103B.101, Subd. 10.

## NEXT STEPS AND RECOMMENDATIONS

The recommended charges for the Upper Red planning region would be the modified combined method as described above based on the simplicity of the methodology, the limitations of the coarse nature of the existing land use raster data, and charge variance for landowners based on contributing area during specific rainfall events.

The Board needs to determine a cost-share policy for work completed in the Whiskey Creek Watershed. One concept that was discussed at the Project Establishment hearing on April 7, 2021 would be to provide up to 100% cost-share (including outside grant funding) to implement the stream restoration and streambank projects along Whiskey Creek and its public water tributaries, and to provide a minimum of 75% cost-share for conservation practices completed on upland areas, away from the stream corridor.

We recommend the Board adopt the proposed charge as described in this memo.

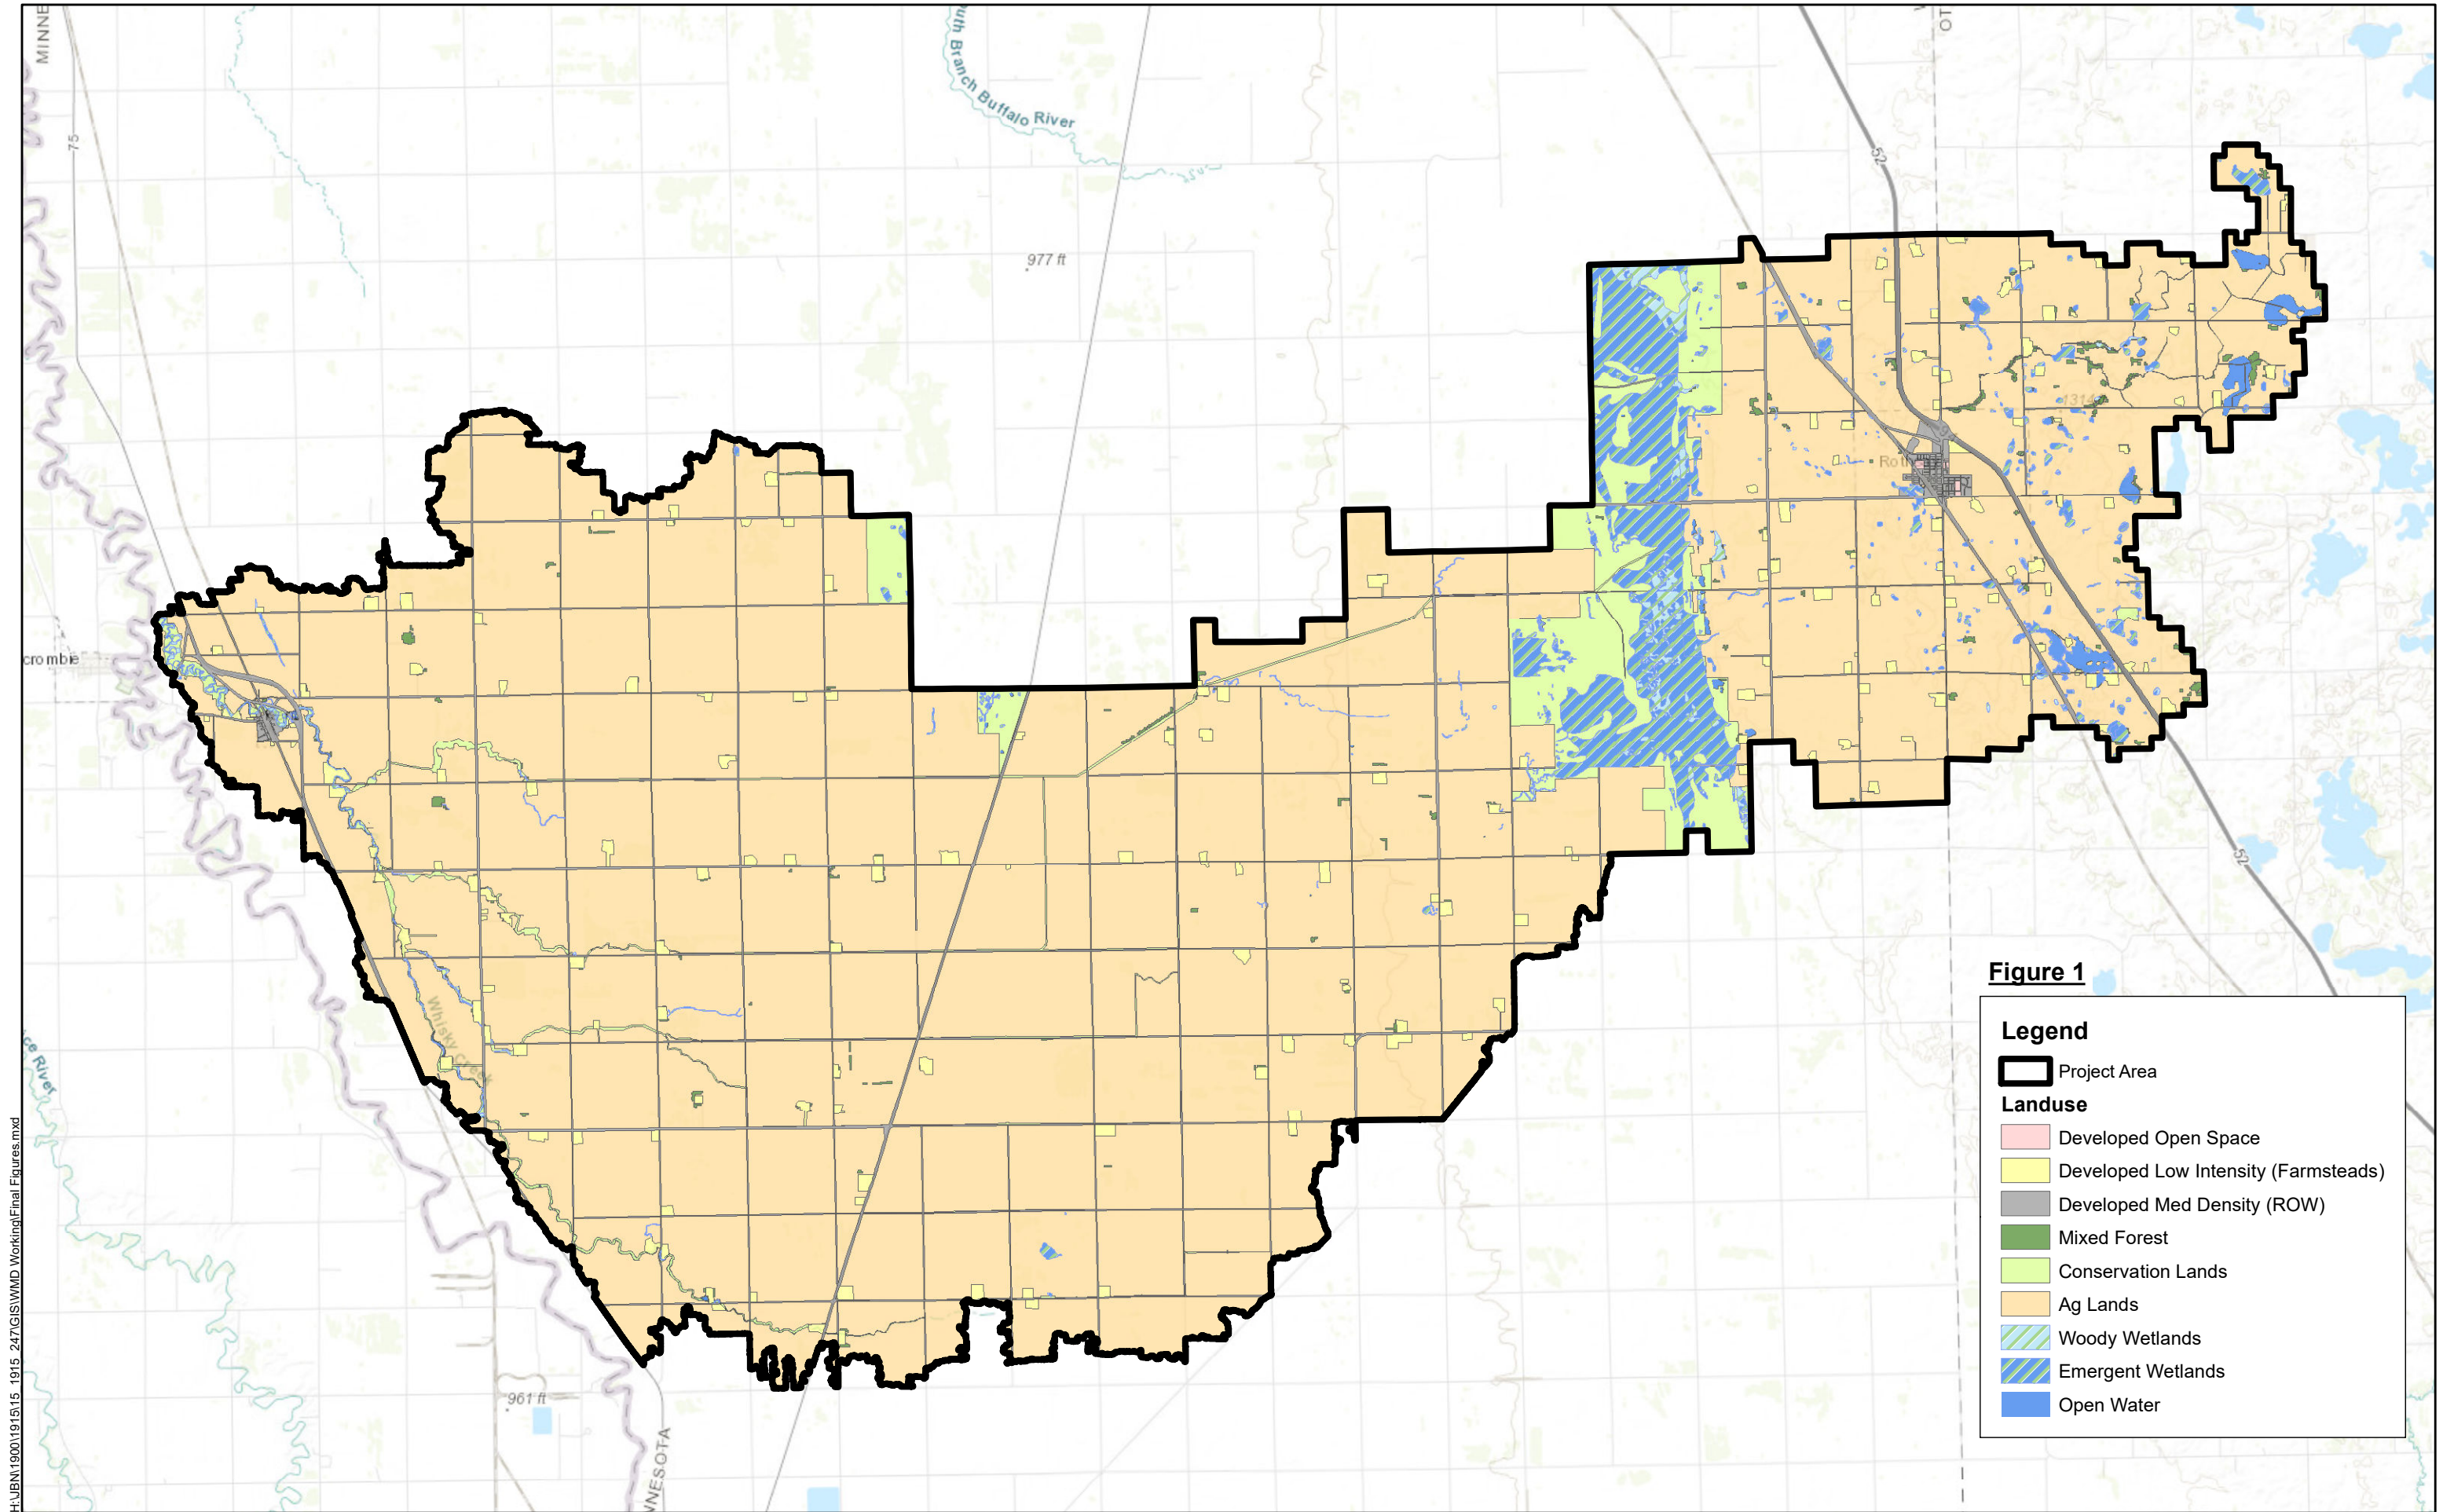

The project needs to be established as a Watershed District project.

Finally, the Board would need to complete the remaining steps as laid out above and as established by BWSR.
