

# Memorandum

---

**To:** Board of Managers  
Buffalo-Red River Watershed District

**From:** Bennett Uhler, PE  
Houston Engineering, Inc.

**Subject:** Upper South Branch Buffalo River Restoration Project  
Water Management District  
Charge Determination

**Date:** February 28, 2025

**Project:** 1915-0172

## INTRODUCTION

The provisions for the collection of charges under MS 103D.729 gives a Watershed District, through the amendment of its plan or during an update to the Comprehensive Watershed Management Plan (CWMP), the authority to establish one or more Water Management Districts (WMD) for the purpose of collecting revenues and paying the costs of projects initiated under sections 103B.231, 103D.601, 103D.605, 103D.611, or 103D.730. The establishment of a WMD requires the description of the methods used to determine the charges. These methods were generally described within the Buffalo-Red River Watershed Comprehensive Watershed Management Plan (BRRW CWMP, finalized on October 28, 2020). The methods for the proposed Upper South Branch Buffalo River Water Management District (Upper South Branch Buffalo River) are further described and the charges determined using these methods by this Memorandum. A general philosophy for funding project discussion believed to be consistent with the policies established within the BRRW CWMP is also presented.

## THE PROJECT

The current project for which a WMD is being considered is the Upper South Branch Buffalo River Restoration Project, from Section 11 of Manston Township downstream to the Clay/Wilkin County line. The project involves restoring and stabilizing several miles of the Upper South Branch Buffalo River, which would result in the construction of a two-stage channel with expanded vegetative buffers, side water inlets, and other sediment control BMPs along the length of the stream. In addition, features of the WMD include maintenance of the Deerhorn Creek Project located in Sections 20, 21, 22, 23, 24, 26, and 27 (Deerhorn Township) and Sections 19, 20, 29, and 30 (Prairie View Township). The BRRWD has applied for permits from the Minnesota Department of Natural Resources (DNR), the US Army Corps of Engineers (USACE), Wilkin County Wetland Conservation Act (WCA), and the Wilkin County Environmental Office (Conditional Use Permit) for this work. The BRRWD has also completed the Environmental Assessment Worksheet (EAW) process with a Record of Decision, dated November 22, 2021, that an Environmental Impact Statement (EIS) is not needed for the project.

## OPINION OF PROBABLE CONSTRUCTION COST

The Opinion of Probable Cost for the project (referred to as the “project estimated cost”) is \$7.8 Million. It is anticipated that more than 70 percent of the overall project costs will come from federal, state, and other outside funding sources. Local funding is anticipated to come in part from a Water Management District.

## WMD BACKGROUND

The BRRWD, through their CWMP, has the authority to establish one or more Water Management Districts for the purpose of collecting revenues and paying the costs of projects initiated under sections 103D.601, 103D.605, 103D.611, or 103D.730. To use this funding method, Minnesota law (MS 103D.729) requires that the area to be included in the WMD be described, the amount to be charged identified, the methods used to determine the charges described, and the length of time the WMD is expected to remain in force specified. The Upper South Branch Buffalo River is within the Southern planning region, as described in the BRRW CWMP. The WMD may be dissolved by the procedures prescribed for the establishment of the Water Management District. Based on the BRRW CWMP, the maximum WMD revenue limit within each WMD is based on 0.10% of the taxable market value within each planning region. For the Southern planning region this equates to a value of approximately \$490,000. To help keep the local cost down on a year-by-year basis, an assessment value of \$125,000 per year has been chosen. **Figure 6** shows a breakdown of the proposed annual charge per acre within the Upper South Branch Buffalo River watershed of the Southern planning region. Based on the proposed per acre charge, \$125,000 could be raised annually from Upper South Branch Buffalo River portion of the Southern planning region. This value of \$125,000 has been used for the purposes of computing the estimated WMD charges.

## PROJECT FUNDING APPROACH

At this point, it is anticipated that the BRRWD will look for a package of funding to pay for the Upper South Branch Buffalo River Restoration Project. The BRRWD has applied for various grant funds to defray the local cost of this project and will continue to look at ways to bring funds into the project from non-local sources. In that regard, the BRRWD has been successful in being awarded various grants. The BRRWD has approximately \$300,000 in a Clean Water Fund Grant from the MN Board of Water and Soil Resources (BWSR) to be used for the Upper South Branch Buffalo River Restoration project. This grant must be matched with 25% non-state funds. In addition, the BRRWD was the recipient of a \$4.9 million National Water Quality Initiative grant through the Natural Resources Conservation Service, which typically pays for only a portion of the overall project cost. Finally, the BRRWD was the recipient of a \$1.3 million grant from the Outdoor Heritage Fund (OHF) grant program through the MN Department of Natural Resources. The BRRWD continues to pursue additional outside funding to defray the local project implementation costs. These include programs through the State of Minnesota and the Natural Resources Conservation Service (NRCS). The WMD envisioned for this project is looked at as a supplemental stream of funding to match outside funding brought in through grant funds and other programs (such as EQIP, CREP, RIM, WRE, etc.) The exact funding package is not fully known at this time. It is also anticipated that the BRRWD will provide funding through funds raised District-wide through a MN Statutes 103D.905 Subd. 3 levy. **Table 1 and Table 2**, shown below, summarize project costs and the current potential funding assumptions.

**Table 1:** Upper South Branch Buffalo River Restoration Project – Opinion of Probable Cost

| Portion of Work                                              | Estimated Cost     | Comments                  |
|--------------------------------------------------------------|--------------------|---------------------------|
| Corridor restoration of the Upper South Branch Buffalo River | \$7,150,000        | Based on Engineers Report |
| Easement Acquisition                                         | \$650,000          | Based on Engineers Report |
| <b>Total Estimated Cost</b>                                  | <b>\$7,800,000</b> |                           |

**Table 2:** Upper South Branch Buffalo River Restoration Project – Potential Funding Options

| Funding Source                           | Estimated Amount   | Comments                                                                 |
|------------------------------------------|--------------------|--------------------------------------------------------------------------|
| BWSR Clean Water Fund                    | \$300,000          | Available for construction through 12/31/2025                            |
| National Water Quality Initiative (NWQI) | \$4,900,000        | Funding approved, but subject to landowner eligibility and participation |
| DNR Stream Habitat Program (LSOHC-OHF)   | \$1,300,000        | Available as of January 2025                                             |
| Water Management District                | \$650,000          | Estimated at approx. 10% of the stream corridor work                     |
| BRRWD 103D.905 Subd. 3                   | \$650,000          | Estimated at approx. 10% of the stream corridor work                     |
| <b>Total Estimated Funding</b>           | <b>\$7,800,000</b> |                                                                          |

## DETERMINING THE WMD BOUNDARY

The drainage area of the project is located within the Southern planning region of the BRRWD. The total calculated area within the project boundary is approximately 78,975 acres. Only the portion of the Southern planning region that drains to the Upper South Branch Buffalo River has been included in the proposed WMD. When the planning region hydrologic boundary crossed a parcel, that portion of the parcel within the hydrologic boundary was included in the WMD. Through discussions with BWSR, the BRRWD will limit the WMD to the portion of the Southern planning region that contributes runoff to the Upper South Branch Buffalo River. In total, this includes about 72,700 acres. Portions of the Southern planning region that do not contribute runoff to the Upper South Branch Buffalo River will not be assessed charges, and in turn will not be allowed to apply for project funds through the WMD. The lands shown in **Figure 1** are those within the Southern planning region and the proposed Upper South Branch Buffalo River WMD, except for areas that may be removed for non-contributing reasons.

## SUMMARY OF CHARGE DETERMINATION

The BRRW CWMP laid out four general methods to determine charges for the Water Management District. The methods proposed to establish the charges will be based upon the proportion of the runoff volume and/or sediment load contributed by a parcel or may be based on the drainage area of the parcel, within the Water Management District. What is described below is a refinement to the methodology listed in the BRRW CWMP due to limitations of the available geospatial data.

## MODIFIED RUNOFF METHOD

This method establishes rates based on a modified runoff method. The runoff method uses SSURGO Soils and Land use data (2019 National Agricultural Statistics and Service) to calculate a curve number related to the percentage of runoff estimated from a rainfall event (10-year, 24-hour). Preliminary review of the 2019 National Agricultural Statistics and Service (NASS) showed several discrepancies with actual landuse data, based on more recent aerial photography and the use of other available tools. Existing riparian corridors were identified and replaced within the NASS data. Lands enrolled in conservation related programs were identified and assigned the landuse of grassland. The National Wetland Inventory (NWI) and the National Hydrography Dataset (NHD) also proved to be more accurate than the NASS data, so this information was used to determine wetlands and waters within the project boundary. Parcels that are inside of corporate limits were considered city lots and assigned the landuse of medium density development. Farmstead parcels that were not already split into separate areas were adjusted from agricultural landuse to low density development. Existing road right-of-way data for Wilkin County was used, along with a small portion of Clay and Otter Tail Counties. Most of the existing right-of-way was present within the parcels; however, parcels that did not include road right-of-way were assumed to be 33 feet on either side of the road centerline. Road right-of-way areas are exempt from this analysis. The existing landuse was identified as nine categories: 1. Open Water, 2. Developed, Open Space, 3. Developed, Low Density (Farmsteads), 4. Developed, Medium Density (City Lots), 5. Mixed Forest, 6. Grassland/Herbaceous, 7. Cultivated Crops, 8. Woody Wetlands, and 9. Emergent Herbaceous Wetlands. **Figure 1** shows the landuse types and areas identified within the project boundary, as described above. **Table 3** shows the curve number based on soil type and landuse. The SSURGO Hydrologic Soil Group data within the project area was used to determine the SCS Curve Number (CN) for runoff. For soils that had a dual classification rating (A/D, B/D, and C/D), a weighted average between the drained and undrained condition was used. Wetlands and waters were exempt from this average and the same value was used under all conditions. **Figure 2** summarizes the SSURGO soils map and **Figure 3** summarizes the CN values throughout the project area.

**Table 3:** Pervious CN by Hydrologic Soil Group

| Land Cover Code                       | Pervious CN by Hydrologic Soil Group |     |     |     |     |     |     |
|---------------------------------------|--------------------------------------|-----|-----|-----|-----|-----|-----|
|                                       | A                                    | B   | C   | D   | A/D | B/D | C/D |
| Open Water                            | 100                                  | 100 | 100 | 100 | 100 | 100 | 100 |
| Developed, Open Space                 | 45                                   | 65  | 76  | 82  | 63  | 73  | 79  |
| Developed, Low Density (Farmsteads)   | 60                                   | 71  | 82  | 86  | 73  | 80  | 84  |
| Developed, Medium Density (City Lots) | 77                                   | 85  | 90  | 92  | 85  | 88  | 91  |
| Mixed Forest                          | 30                                   | 55  | 70  | 77  | 54  | 66  | 74  |
| Grassland/Herbaceous                  | 30                                   | 58  | 71  | 78  | 54  | 68  | 75  |
| Cultivated Crops                      | 61                                   | 71  | 78  | 81  | 71  | 76  | 80  |
| Woody Wetlands                        | 78                                   | 78  | 78  | 78  | 78  | 78  | 78  |
| Emergent Herbaceous Wetland           | 85                                   | 85  | 85  | 85  | 85  | 85  | 85  |

## RUNOFF CHANGES

The runoff values for the project area were calibrated by comparing the runoff results from a 10-year, 24-hour rainfall event (3.70 inches) for pre-settlement and existing conditions. Pre-settlement conditions used a landuse of grassland/herbaceous across the entire area outside of existing wetlands and open water, while existing conditions used the landuse as exists today. An average CN for each landuse was calculated in each area to normalize the data and reduce large fluctuations in assessment values between individual parcels within a given area. The difference in runoff values were summed and each parcel was assigned its relative percent of the total project area, by landuse. **Figure 4** shows the change in runoff conditions throughout the project area.

## CONTRIBUTION AREA

Not all the land within the project area contributes runoff and sediment during a 10-year, 24-hour rainfall event. In fact, there are some areas that do not contribute during a 100-year, 24-hour event. **Figure 5** summarizes the non-contributing areas within the project boundary, based on specific rainfall events. To account for areas with reduced contribution, or no contribution at all, a multiplier was used based on the event frequency. The total change in runoff and sediment load was adjusted based on this multiplier, as shown in **Table 4**.

**Table 4:** Runoff and Sediment Adjustment Multiplier

| Rainfall Event (24 Hour Storm)                                                  | Multiplier | Area (Acres)  |
|---------------------------------------------------------------------------------|------------|---------------|
| Less than 10 Year                                                               | 1          | 71,287        |
| 10-25 Year                                                                      | 0.4        | 582           |
| 25-50 Year                                                                      | 0.2        | 381           |
| 50-100 Year                                                                     | 0.1        | 450           |
| 100 Year or Greater                                                             | 0          | 6,275         |
| <b>Total Area – Contributing<br/>(Less than 100-year, 24-hour event)</b>        |            | <b>72,700</b> |
| <b>Total Area – Non-Contributing<br/>(Greater than 100-year, 24-hour event)</b> |            | <b>6,275</b>  |
| <b>Total Area (Combined)</b>                                                    |            | <b>78,975</b> |

## WMD ANNUAL CHARGE PER ACRE

To calculate the annual charge per acre, the annual project Water Management District charge estimate of \$125,000 was multiplied by the percent runoff change and total sediment change for each parcel, then adjusted to the frequency of the multiplier shown in **Table 4**. All agricultural land was assigned the same cost per acre assessment. Parcels located within City limits were charged a minimum of \$1 per year, and parcels with a charge less than \$1 per year were rounded up to \$1 per year, to simplify billing. All parcel charges above \$1 per year were assigned their calculated value. Following the methods previously described, the exact charge estimate equals \$125,000. **Figure 6** summarizes the charges per acre/per year on a parcel basis based on the annual WMD charge estimate of \$125,000. The total annual charges per parcel are summarized as found in the tables in **Exhibit A**.

## THE WATER MANAGEMENT DISTRICT DURATION

The BRRWD anticipates the Water Management District will provide funding to assist with the implementation and maintenance of the Upper South Branch Buffalo River Restoration Project. The Water Management District will remain in existence in perpetuity (or a shorter duration, should the Board decide to limit the duration). Annual assessment of charges could vary from no charges up to the maximum WMD revenue limit of the planning region.

The primary use of the funds collected from charges within the Water Management District will support stormwater runoff and water quality projects that help achieve the goals of the planning regions which benefit residents within the Southern planning region Water Management District. This Water Management District will be specific to the establishment and maintenance of the Upper South Branch Buffalo River Restoration Project.

## THE WATER MANAGEMENT DISTRICT PROCESS

Draft guidance as to the process of creating a WMD has been provided by BWSR. The process involves eight steps. The first two steps are addressed through the revision of the Watershed Management Plan. The remaining steps 3 through 8 must be completed prior to any collection of charges in any WMD. This memo provides the guidance for Steps 3 and 4. The remaining steps 5 through 8 still need to be completed.

**Step 1.** Amend Watershed District Plan to create a water management district.

Amendment must include:

- Description of area to be in the water management district
- The amount to be raised by charges (total amount is necessary if fixed time for water management district to be in force, otherwise annual maximum (cap) amount)
- The method that will be used to determine the charges
- The length of time the water management district will be in force (perpetuity is acceptable)

**Step 2.** Approval of Plan amendment under M.S. § 103D.411 or as part of a revised Plan under M.S. § 103D.405.

- Revised Plan, or petition and amendment, sent to BWSR
- BWSR gives legal notice, and holds hearing if requested
- BWSR orders approval or prescribes plan or amendment
- BWSR notifies WD managers, counties, cities, SWCDs

**Step 3.** Watershed District refines methodology for computing charges.

**Step 4.** Watershed District determines and sets charges for all properties within the water management district after identifying scope of project and deciding method(s) of funding project.

**Step 5.** Watershed District develops collection mechanism.

- Request County or Counties to collect, or Billing and collection by Watershed District

**Step 6.** Watershed District holds hearing, orders the establishment (implementation) of a project in the water management district, and initiates stormwater utility charges.

- Projects implemented must be ordered by the managers
- Order for project must specify funding method(s)

- Watershed District must notify counties, cities, and towns within the affected area at least 10 days prior to a hearing or decision on projects implemented under this section of statute

**Step 7.** Watershed District establishes a separate fund for proceeds collected from the stormwater utility charges.

**Step 8.** Resolution of Disputes. Local governments may request BWSR to resolve disputes pursuant to M.S. § 103B.101, Subd. 10.

## NEXT STEPS AND RECOMMENDATIONS

The recommended charges for the Southern planning region would be the modified method as described above based on the simplicity of the methodology, the limitations of the coarse nature of the existing land use raster data, and charge variance for landowners based on contributing area during specific rainfall events.

We recommend the Board adopt the proposed charge as described in this memo.

The project needs to be established as a Watershed District project in accordance with MN Statutes 103D and the water management district needs to be established as outlined above and as established by BWSR.
